

Deterministic pipeline comparison

Layered CKC artifacts are compared with direct rule-to-SMT over identical M3 groups.

run m3-compare; n = 10 groups

`direct_rule`

`layered_ckc`

Interpretation

Direct baseline verdict accuracy is 10/10. Layered verdict accuracy is 10/10; layered-minus-direct verdict delta is 0/1.

Component reuse delta is 60/71. This is deterministic pipeline evidence and is separate from model-route baseline deltas.
